COMPOSITE DRYWALL CORNER BEADS, TRIMS, TAPES & PATCHES

ClarkDietrich.

REACH THE FINISH LINE
A WHOLE LOT FASTER.

You've got a lot of space to cover, and it's not all on the jobsite. ClarkDietrich finishing products elevate the quality of your craft and help eliminate the stuff that slows you down. From interior to exterior, our systems save steps, materials and hassles, so you can trade in the walls for whatever's waiting for you outside.

Flexible Corner Beads

PAPER-FACED COMPOSITE

FEATURES

- High-performance drywall corner bead.
- Memory-free hinge produces straight corners and perfect angles.
- Installs with all-purpose joint compound.
- Composite structural backing provides strength and a superior bond to the drywall surface.
- Diamond-punched paper edging provides maximum adhesion - no cracks, no call backs.
- Finishing compound is not required over the laminated area - uses half the compound vs. standard corner bead.
- Paper will not fuzz-up during sanding.
- Resists dents and common cracking problems.

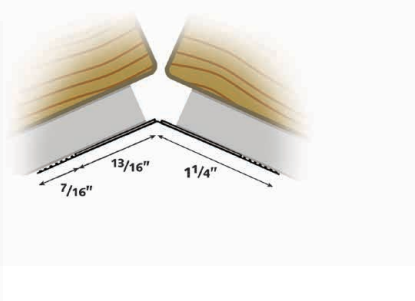

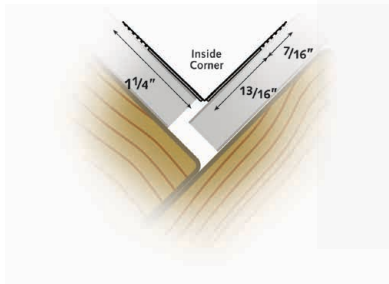

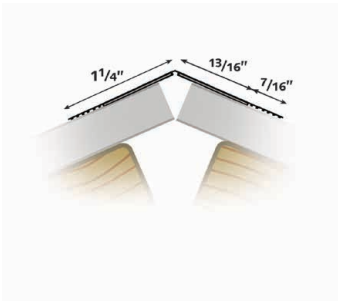

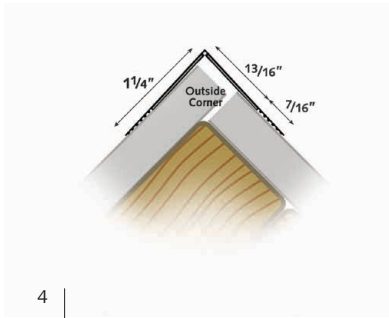

Strait-Flex Gold

FINISHES INSIDE & OUTSIDE 90° AND OFF-ANGLE CORNERS

2 1/2" w (63mm)

- Inside and outside corners where common gaps in drywall are present.
- Inside 90° corners where a large fill or straightening is required, no back filling needed.
- Great for vaulted, coffered and tray ceilings, bay windows.

Flexible Corner Beads

COMPOSITE

FEATURES

High-performance drywall corner bead.

Installs with all-purpose compound.

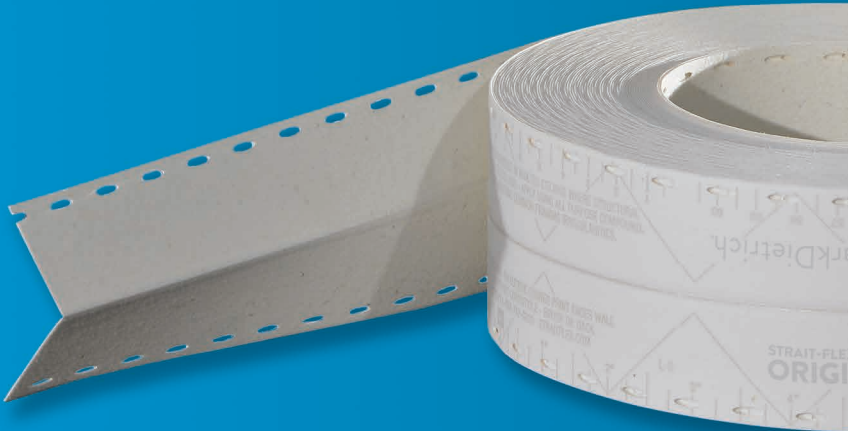

Spans gaps in drywall. No back-filling required.

Composite fiber backing embeds into compound to provide a superior bond to the drywall surface.

First finishing coat of compound can be applied immediately with no delayed shrinkage, no edge cracking.

Full composite construction, no paper.

Resists dents and common cracking problems.

Strait-Flex Medium

FINISHES INSIDE 90° & OFF-ANGLE CORNERS

2 1/4" w (57mm)

- Twice as fast and twice as strong as conventional paper or mesh tapes.
- Inside corners where small gaps in drywall are present.
- Inside 90° corners where a small fill or minor straightening is required, no back filling needed.
- Great for vertical and wall-to-ceiling inside corners, inside angles of bay windows.

Stick Corner Beads

PAPER-FACED COMPOSITE

FEATURES

- Clean, square, low-profile installation.
- Composite backing provides a tough, durable corner.
- Diamond-punched paper edging allows for easier feathering, faster drying, and the highest bonding strength. Also guarantees an even lay down of paper, providing maximum adhesion with no rippling or blistering.
- Paper surface is pre-treated to accept paint. Finishing compound is not required over laminated area.
- Perfect corners without paper fuzz-up during finishing and sanding.
- Straightens common framing irregularities.

Strait-Flex IS-300

DESIGNED FOR INSIDE 90° CORNERS WHERE SPEED, AND STRENGTH ARE NEEDED, AND WHERE LARGE FRAMING IRREGULARITIES NEED TO BE OVERCOME

3" w (76mm)

- Vertical or horizontal inside 90° corners.
- Clean installation.
- Diamond-punched paper edging allows for easier feathering, faster drying, and the highest bonding strength. Also guarantees an even lay-down of the paper, providing maximum adhesion with no rippling or blistering.
- Composite PVC provides a tough, durable corner.
- Perfect corners without paper fuzz-up during finishing and sanding.

Stick Corner Beads

COMPOSITE

FEATURES

Impact resistant nose for high-traffic areas where bumps and dents to corners commonly occur.

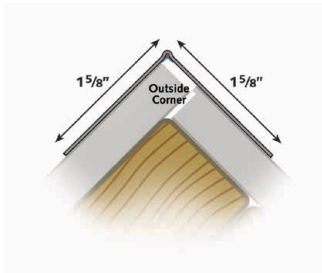

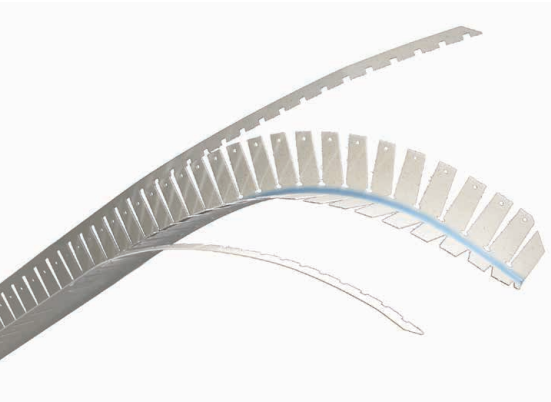

Installs square to the wall using one of Strait-Flex's specially designed rolling tool.

Beaded nose creates a perfect clean egde.

Second coat of compound can be applied immediately – very light skim coat to finish.

Provides a beautiful corner without fuzz-up during finishing and sanding.

Cuts easily.

Strait-Flex Arch-Stick

DESIGNED FOR OUTSIDE 90° ARCHED CORNERS
ELIMINATING FLAT SPOTS

3 3/8" w (86mm)

- Tear strips reduces transportation damage and is designed to make curved to straight transitions unnoticeable.
- Composite nose resists dents and provides a beautiful corner without fuzz-up during finishing and sanding.
- Arched doors and windows.
- Curved walls, ceilings, soffits, staircases, and groin barrel ceilings.
- Free-form, custom drywall applications where a seamless installation is required.

Strait-Flex Tuff-Tape

DESIGNED FOR STRENGTH AND SPEED AND AS A PAPER TAPE REPLACEMENT

2" w (51mm)

- Inside corners and flat seams.
- Use in areas where humidity causes paper tape to fail and when strength and speed are required.
- Two times stronger than paper tape.
- Resists blisters, tears, and common cracking problems.

Strait-Flex Tile-Tape

DESIGNED FOR TILE, MARBLE, AND GRANITE.
WATER AND MOLD-RESISTANT

2 1/4" w (57mm)

- Produces straight, strong, and water-proof inside, outside and off-angle corners.
- Designed for taping the water-resistant backing board for tile and marble applications.
- Prevents leaks caused by common grout cracks.
- Twice as strong than paper or mesh tapes.
- Watertight seams.
- Mold-resistant. Alkali resistant.
- Will not cut or snag with notched trowel when applying tile setting compound.
- Apply over fiber cement board, green board, mold-resistant board, or water-resistant board in wet areas (tubs, showers, tile counter tops, tub deck, and steps).

Strait-Flex Butt-Tape

DESIGNED FOR FAST, FLAT, BUTT-JOINTS

2 1/16" w (52mm)

- Vertical and horizontal butt-joints.
- Commercial "Top-Out" applications.
- Cracked butt joints and stress cracks.
- Twice as fast as conventional tapes. 50% less compound. 50% less sanding. 50% faster drying time.
- No pre-filling required. No delayed shrinkage. No beading. No paint blisters.
- No compound required over laminated area of tape. Just skim coat edges.
- Apprentices and professional tapers can achieve the flattest butt-joints possible. Leaves butt-joints virtually unnoticeable.
- Two times stronger than paper or mesh tape.

Mud-Pro²

FEATURES

The fastest, cleanest, and most durable compound applicator on the market.

Designed to apply precise amounts of compound to inside and outside 90° corner beads, flex tapes, and outside bullnose and chamfer corner beads.

Mix and store compound in same bucket.

Five gallon compound capacity.

No daily clean-up. Just fold legs; drop into 6" of water.

Stainless steel construction for long-life.

Includes Mud-Pro² mounted to bucket, and second bucket.

X-Crack

FEATURES

Flexible Tabs

Allow structural movement independent from the drywall inside corner joint.

Straightens uneven roof framing members during installation.

Pre-drilled for easy installation.

PVC Hinge

Adjusts to all inside and outside angles.

For inside corners, the surface of the PVC hinge faces the framing members.

For outside corners, the surface of the PVC hinge faces out.

NO CRACKS X-Crack® eliminates all cracks in vaulted ceilings, butterfly vaults, and inside 90-degree corners in flat ceiling areas caused by truss uplifts. This patented product holds drywall joints stationary while allowing structural movement of framing members.

STRAIGHTENS X-Crack's rigid design, hinged backbone, and flexible tab design will straighten all uneven framing members. This pre-straightening of sub-structure will eliminate the need of all pre-filling due to irregularities of framing members. It makes easy work of intricate ceiling applications that have no backing.

FAST X-Crack is adjustable to any inside or outside angle and installs in minutes. X-Crack will reduce finishing time by the elimination of pre-filling and pre-straightening. Your drywall finisher will start with a perfectly even and straight joint.

PERMANENT Follow the installation instructions and you will solve the age-old problem of ceiling cracks and uneven framing!

DESCRIPTION X-Crack is a patented, floating alignment joint member manufactured from 24 mil G90 galvanized steel and is available at your local drywall distributor in ten foot length rolls. Each X-Crack carton contains ten 10' rolls (100 lineal ft).

ADVANTAGES

Eliminates inside and outside cracks in ceiling corner joints.

Eliminates costly repairs due to ceiling cracks and the inconvenience to dissatisfied home owners.

Eliminates pre-filling or pre-straightening by finisher when ceiling members are not in alignment.

Quick installation time - 50 feet of X-Crack takes about 10 minutes to install.

Perfectly straight inside and outside ceiling corners.

Makes easy work of complex, intricate ceiling applications that have no backing or uneven framing.

Eliminates wood backing in vaulted areas.

Provides straight continuous backing for fastening in tee-pee ceilings and butterfly vaults.

The time saved by the drywall finisher pays for the material costs many times over.

Combined use of X-Crack and Strait-Flex Gold or Mid-Flex flexible corner trim results in permanent protection against cracks.

Strait-Flex X-Crack

FRAMING ALIGNMENT

- Eliminates ceiling cracks and straightens uneven framing.
- Drywall ceiling areas that use wood roof trusses or conventional wood framing members.
- Intricate ceiling applications, such as tee-pee ceilings in octagon rooms and butterfly vaults.
- Areas where framing members are out of alignment.
- Ceiling areas where drywall is not properly supported.
- Ceiling areas where movement may occur.
- Stainless steel construction for long-life.

 Pallet Weight: 544 lbs. 1048 lbs.
 (247kg, 475kg)

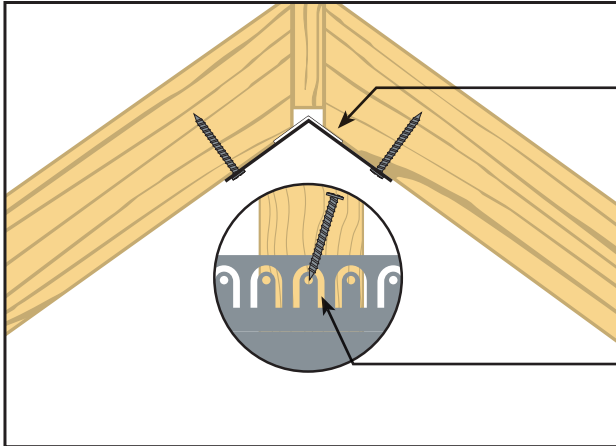

Installation Requirements to Eliminate Potential For Cracks

Adjust X-Crack to desired angle and use drywall screws to fasten it to ceiling framing members. Install drywall over X-Crack using fine or coarse threaded screws – be sure screws only penetrate drywall and X-Crack but miss trusses or ceiling joists by 2 to 4 inches. You must install the last screws in the field 10 to 12 inches away from X-Crack to allow for lumber movement. By missing the framing members and fastening drywall boards only to X-Crack; finished inside corners will not move or crack. Use Strait-Flex **Gold** or **Mid-Flex** flexible corner trim to complete installation.

NO SCREW SHOULD PENETRATE ALL THREE MATERIALS
 (drywall - X-Crack - framing members)

U.S. Patent No. 9,222,266

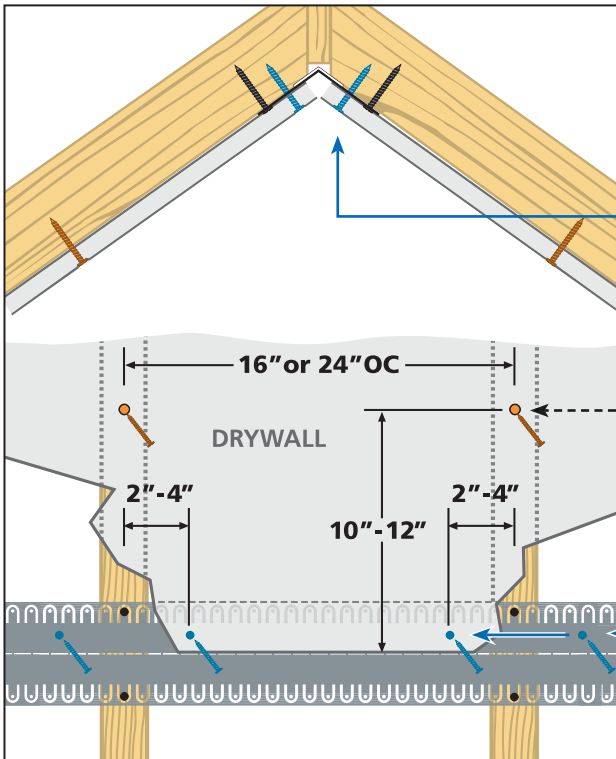

Installation Instructions

Fasten X-Crack to ceiling trusses or conventional framing members before drywall installation.

Directions for Use

- 1 Adjust X-Crack to angle of corner. For inside corners, surface of PVC hinge faces framing members. For outside corners, surface of PVC hinge faces out.
- 2 Using drywall screws, first fasten X-Crack at end of lengths. Align center and fasten to framing members. Overlap X-Crack approximately one inch at joints.
- 3 Let X-Crack float over irregular framing members to create a straight line. Six screws per length is all that is required to hold X-Crack in place. The last screws in the field secures drywall to ceiling - and the screws through drywall into body of X-Crack secures inside corners.

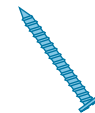

- 4 Install drywall over X-Crack with fine or coarse drywall screws. Be sure the drywall screws penetrate the X-Crack product but miss the truss or ceiling joist by 2 to 4 inches.

The last screw in the field should be 10 to 12 inches away from X-Crack. This allows ceiling members to move independently of drywall joint.

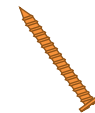

- 5 Use Strait-Flex **Gold** or **Mid-Flex** flexible corner bead to finish the application.

X-CRACK TO CEILING MEMBER
Penetrates: X-Crack, Framing Member

SCREWS THAT SECURE
DRYWALL TO X-CRACK
Penetrates: Drywall, X-Crack

LAST SCREWS IN FIELD
Penetrates: Drywall, Framing Member

X-Crack's patented hinge and flexible tab design holds drywall joints stationary while structural framing members are allowed to move independently of the drywall. Causes for this movement may be due to lumber shrinkage, snow or wind loads, and truss uplift.

DO'S

Keep a bucket of water nearby for mixing and tool clean up.

Use all-purpose compound for bed coat and coating screws.

Add water and mix compound thoroughly to a smooth creamy texture.

Keep the inner side walls of the compound bucket clean and smooth with a wet sponge. Hardened compound on the sides of the bucket could fall into the smooth compound and will streak when applied to the drywall surface.

Set all screws below the surface of the drywall. Check with a taping knife as the knife will snag on screws not set deep enough.

Use a brush to wipe away any dust before applying compound.

For outside corners, use a drywall rasp to remove any drywall edges that extend over the adjacent drywall surface.

Use the correct product for the job. The better the framing and hanging; the smaller the product. The larger the gaps, the worse the framing; the larger the product.

(Composite flexible corner beads) Always fold print side together. Fold tighter for outside corners and more open for inside corners. This ensures the product lays flat on the wall.

(Paper-faced flexible corner trims) Print side faces out for both inside and outside corners.

Trim the ends of corner beads and trims at a 45° angle. This will keep them flat on wall.

(Patches) Apply compound to the back of all patches, flip over, and apply patch to the damaged area. Strait-Flex patches become rigid because of compound on back of patch.

Use 150-200 grit sandpaper when finish coat is lightweight compound (softer compound). Use 100-150 grit sandpaper when finish coat is all-purpose compound (harder compound).

DONT'S

Use light-weight finishing compound for bed coats. Light-weight compounds don't have the strength of taping compounds.

Dilute compound with too much water.

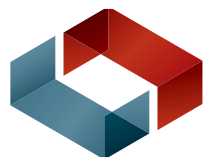

Use the wrong size product for the job.

Overlap tapes or corner beads.

THE RIGHT PRODUCT FOR THE RIGHT APPLICATION
